VISUAL INSPECTION

A careful and critical assessment of the components, without dismantling the unit. The inspection is recorded in a report. The results of the visual inspection can be used to determine whether any additional work is required.

EXAMINATION

A systematic and detailed examination by dismantling your transfer device. Measurement and non-destructive testing is carried out as necessary. For lifting assemblies this includes a visual inspection of the condition of the lifting assemblies. In order for end fittings of lifting assemblies to be examined properly, they may need to be dismantled.

LOAD TESTING

A load test is carried out following the replacement of critical parts and a certificate is issued. Load tests are followed by visual inspection.

CRITICAL COMPONENT REPLACEMENT

Critical parts are those essential to the load bearing path of your transfer device. These should be replaced routinely at intervals according to their usage.

MAINTENANCE

Worn or damaged parts can often be replaced. Our trained technicians will ensure the correct parts are used and replaced in the correct manner.

REPORTS AND CERTIFICATES

All service work is accompanied by a thorough report which includes photos, inspection checklists and the associated certificates.

RENTAL UNIT

Rental units are available, to ensure continuity of operations, whilst yours is in for service. Please contact us for further details and availability.
